

Quick access to all of your files could be a decisive competitive factor especially in customer focused businesses. Organisations need access to relevant customer; staff or business records in a matter of seconds, this requires an efficient system capable of managing large amounts of data and information so that it is readily accessible. Consequently, it is important that an electronic archiving system is structured as efficiently as possible and used to maximum

economic benefit. The eStor electronic archiving solution uses web browser technology to give access to information as efficiently as possible it can also link to Microsoft® 'Active Directory' structures to make information easily accessible to users via a LAN, WAN or Web. One of the outstanding features of this system is its flexibility in handling a huge variety of file types whilst making them accessible and viewed via a single universal viewer - Acrobat Reader®. Another of the key advantages is that the system is independ-

eStor web-based archiving solution

ent of location, the internet offers access to your files with maximum flexibility provided of course that the user has the necessary authority to do so and that they meet the multi-level security clearance criteria. eStor offers maximum performance and individuality. The system's multi-user capability permits application-based design of the search tools with variable search profiles. Direct access to the required information may be configured in

structured search trees providing a schematic style view of available files. Access control via user groups regulates user authorisation in relation to individual document classes this ensures that every user can only access information for which he or she has appropriate authorisation. In addition, scheduled or automated search processes can also be triggered, either for immediate use or for repeat or scheduled searches. The use of eStor as a central document management and archiv-

electronic document solutions

eStor

web-based archiving solution

eStor offers a high degree of flexibility, performance and innovation in the distribution of business documents. eStor together with the proven benefits of the Internet brings real efficiency to digital document archiving solutions eStor is just one of a family of products from DocStor designed to help **your business** manage its files and documents easily; economically and efficiently.

Using state-of-the-art XML and XSLT technologies, eStor offers great efficiency in the flexible design and processing of information. The modular, individually configurable design ensures a high level of user acceptance and facilitates the integration of **eStor into the customer's website**.

Especially when using ASP applications, this flexibility of system design, in combination with the clear distinction between individual user groups, is another decisive advantage.

The technical structure of the system is based on SQL / ODBC databases in connection with Microsoft Internet Explorer® 5 or later and Adobe Acrobat® plug-ins, Mozilla Firefox® internet browser is also supported. To complement the eStor Business solution DocStor also offers eStor Hosted and eStor Venture solutions designed for smaller or low volume users. These also offer the option of exporting information to self-contained media, such as CDROM or DVD-R, including the necessary search software for external, network-independent users.

System requirements

Windows 2000/2003 Server or later
Windows XP or later
Apache Tomcat Web Server
Java Server Pages (JSP)
MS-XML 3.0 or higher

Key system features

- » **Open, state-of-the-art** system architecture
- » **Simple, user-oriented** retrieval structure
- » **Wide variety of document types**
- » **Extensive search profiles and** search tree structures
- » **Easy to use archive administration,** including multi-user capability
- » **SQL, ODBC database**
- » **XML, XSLT technology**
- » **PDF plug-in**
