

1. Configuration of Internet Information services.

1.1. Create a link to the mail server.

- Open the Internet Services Manager
Start - Settings - Control Panel - Administrative Tools - Internet Services Manager.
- Select **Default SMTP virtual Server**
- Select properties (Right Click)

- Select the tab **Delivery**
- Click on the **Advanced** Button

In the Text box "Smart Host" :

Type the link to your mail server.

2. Configure e-Codis.

2.1. Mail PDF

Edit the file `..\ecodis\www\codis.asp`
Set the variable `bMailPDF = True`

2.2. Request images to an operator when the images are not available online

Edit the file `..\ecodis\www\codis.asp`
Set the variable `bRequestImage = true`

2.2.1. Configure the Operator Settings (Temporary)

Edit the file `..\ecodis\bin\Script.js`
Search bart.vansteen.bv@belgium.agfa.com and replace this email address by your Operators email address.
